Research Experience

Part-wise Artistic Mesh Generation (MeshPack) *Apr 2025 – Present*
Advisors: Prof. Sida Peng and Prof. Xiaowei Zhou

- Contributed to point-cloud-conditioned, part-wise autoregressive mesh generation using Qwen3-0.6B as the base model.
- Studied component-wise generation without additional part-level inputs, supporting high face counts and fine coordinate quantization.

Monocular Depth Estimation (PromptDepthAnything++) *Jan 2025 – Jun 2025*
Advisors: Prof. Sida Peng and Prof. Xiaowei Zhou

- Contributed to a Transformer-based fusion of prompt and image tokens for metric depth estimation.
- The method supports pattern-agnostic sparse-point prompts, extending the original low-resolution-depth prompting setup.

Large-Scale Dynamic Scene Reconstruction (Hierarchy UGP) *Jun 2024 – Feb 2025*
Advisors: Prof. Sida Peng and Prof. Xiaowei Zhou

- Contributed to a hierarchical representation combining static and dynamic Gaussian primitives for large-scale street scenes.
- The representation combines hierarchical Gaussians for static backgrounds with 4D Gaussians for non-rigid motion to reduce memory demands and improve reconstruction quality.
